Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            gap of unknown length

Submitted (07-FEB-2002) Production Sequencing Facility, DOE Joint
Genome Institute, 2800 Mitchell Drive, Walnut Creek, CA 94598, USA
On Feb 7, 2002 this sequence version replaced gi:16924076.

This entry has been annotated with sequence quality
estimates computed by the Phrap assembly program.
All manually edited bases have been reduced to quality zero.
Quality levels above 40 are expected to have less than
1 error in 10,000 bp.
Base-by-base quality values are not generally visible from the
GenBank flat file format but are available as part
of this entry's ASSUI file.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       PRI 07-FEB-2002

All manually edited bases have been reduced to quality zero. Quality levels above 40 are expected to have less than 1 error in 10,000 bp.

/note="Organ: Rnee; Vector: pT773-pac (Pharmacia) with a Modified polylinker; Site_1: ECOR I; Site_2: Not I; modified polylinker; Site_1: ECOR I; Site_2: Not I; modified polylinker; Site_1: BCOR I; Site_2: Not I; modified polylinker; Site_1: Bcortaing the Not I cartilage The library constructed according to Bonaldo, Lennon and Soares, Genome Research, 6:791-806, 1996. First strand cDNA synthesis was primed with an oligo-dT primer containing a Not I site. Double stranded cDNA was ligated to an ECOR I adaptor, digested with Not I, and cloned directionally into pT773-Pac vector. The oligonucleotide used to prime the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the

/note="Vector: pSPORTI; Site_1: SalI; Site_2: NotI; RNA
was prepared from a pool of 6 anonymous Wilms' tumor RNAs.
RNA was prepared by acid-phenol, followed by one round of
light of relection. Dela Library preparation was with
the BRL/Life Tech. Superscript Plasmid system. An
oligo-dT NotI primer for first strand synthesis generated
gaggccgccc(1) at the 3' end of the clones. A 5' SalI
adaptor was used with sequence 5'-gtcgacccacgcgtccg-3'
Resulting cDNAs were size selected (average size 2 kb),
NotI digested, and ligated into NotI/SalI-cut pSPORTI.
Library was constructed by Dr. Manfred Gessler."

purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified CDNAs from a pool of 5,000 clones made from the same library (cloneibs 13223/6-1323911, 1456007-1456775, and 1500552-1502855). Subtraction by Bento Soares and M. Fatima Ronaldo. "

IU-E-CII is a normalized oDNA library containing the following tissue(s): RPE and Choroid. The library was constructed according to Bonaldo, Lennon and Soares, synthesis was primed with an oligo-dT primer containing a synthesis was primed with no ligo-dT primer containing a daptor, digested with Not I, and cloned directionally the synthesis of first-strand cDNA was ligated to an EcoR I alto primes for the synthesis of first-strand cDNA contains a library tag sequence that is located between the Not I site and the sequence tag for this library is ACCTA. This library was created for the program, Gene Discovery in the Wisual System, supported by National Eye Institute
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ;

pCMV-SPORT6; Site_1: Not1: Site_2: ECGKV (destroyed): Source anonymous pool of 3 colons, age 26 yo male, 49 yo stomachs, 62 yo male and 70 yo female. Library is oligo-dT primed and 70 yo female. Library is oligo-dT primed and directionally cloned (ECGKV site is destroyed upon cloning). Average insert size 1.4 kb, insert size range 1.3 kb. Library is normalized and enriched for full-length clones and was constructed by Clouds. (Note: this is a NIH_MGC Library."

Anote—"Octanon pooled colon, kidney, stomach; Vector: Anote—"Octanon pooled colon, site_1: EcoRV (destroyed): RNA source anonymous pool of 3 colons, age 26 70 male, 49 yo stomache, 71 yo male colon; 46 yo male kidney, and pool of 2 stomachs, 62 yo male and 70 yo female. Library is oligo-dr primed and directionally cloned (EcoRV site is destroyed upon cloning). Average insert size 14 kb, destroyed upon cloning). Average insert size 14 kb, enriched for full-length clones and was constructed by Ceruber (Invitrogen). Research Genetics tracking code
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            ö

from the normalized library NCI_CGAP_GC4 was prepared, and
from the normalized library NCI_CGAP_GC4 was prepared, and
ss circles were made in vitro. Following HAP purification,
this DNA was used as tracer in a subtractive hybridization
reaction. The driver was PCR-amplified cDNAs from a pool
of 5,000 clones made from the same library (cloneIDs
1257096-1258631, 1469064-1470993, and 1475592-1476743).
Subtraction by Bento Soares and M. Fatima Bonaldo. "

/note="Corgan: kidney; Vector: pT773D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; 1st strand cDNA was primed with a Not I: Oligo(dT) pTrimer, double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT773 vector. mRNA source: 2 pooled kidneys. Library went through one round of normalization. Library constructed by Bento Soares and M. Fatima Bonaldo.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                W79362 2d72d09.rl Soares_fetal_heart_NDHH19W Homo sapiens cDNA clone IMAGE:346193 5' similar to SW:MANR_HUMAN P22897 MACROPHAGE MANNOSE RECEPTOR PRECURSOR.
